

Vehicle Access Control Case Study

CLIENT: Leicestershire County Council

The Loughborough Technology Centre (LTC), a prestigious business park managed by Leicestershire County Council is bordered by both Loughborough College and Loughborough University. Businesses based at the LTC had increasing problems with students using the car park as free parking, causing problems for legitimate LTC visitors and staff.

To solve the problem ITS installed a D-MON access barrier system to ensure only authorised LTC users used the car park. The access system supplied by ITS has provided a cost effective solution and has eliminated the problems.

For information on vehicle access control and more security and access solutions please contact us at the address below.
